

# **FOUNDATIONS ON THE LEVEL**

**POB 1921 Carlsbad, Ca. 92018  
760-889-8150**

## **BACKGROUND PROFILE**

**My experience with foundations began in 1980 on Fire Island installing 40 foot Pole Pilings deep into the sand for new beach house foundations.**

**After moving to California in 2000 I began designing projects and installing resistance piers to re-level residential and commercial buildings.**

**I ran the project to re-level the Double Tree Hotel in Berkeley, California. This was a massive project, 258 Resistance Piers were installed 26 stories deep to lift this three story hotel 18" out of the ground. The project was successful and completed without a hitch. These experiences prove valuable when designing solutions for your foundation.**

**We install the best Pier Systems manufactured by "Earth Contact Products" the leader in the industry.**

**We have the latest technologies to weld slab cracks closed with "Roklin Epoxy Systems" and "Fortress Carbon Fiber" for stitching across slab cracks.**

**I will complete a thorough inspection of your foundation and design a solution to mitigate the foundation failure. I am responsible for every project and we promise to meet all of your expectations.**
